Raj Kumar S

iOS Product Engineer | Native UI Components

Chennai, India | hello@iamnyx.dev
iamnyx.dev | linkedin.com/in/raj-kumar-s | github.com/coding-nyx

PROFILE

iOS product engineer at Zoho since May 2022, building reusable UI components and platform libraries. Experience spans app revamps, native UI performance, API integration and developer tooling.

TECHNICAL SKILLS

Native: Swift, UIKit, SwiftUI, UICollectionView, UITableView, collection-view layouts, SPM.
Performance & tooling: Xcode Instruments, layout-attribute caching, Git, MCP, component integration APIs and documentation.
Supporting: Kotlin, Jetpack Compose, TypeScript, React, Firebase, Zoho Catalyst, Linux.

EXPERIENCE

Software Engineer | Zoho | May 2022 - Present

- **Production App Revamp:** Integrated updated web APIs and mobile response mapping for a major revamp; contributed to planning and led UI and navigation improvements. Also contributed to features, fixes and minor releases.
- **Reusable Product UI:** Developed Kanban, spreadsheet and navigation components used by four teams across four apps; prototyped UIKit, SwiftUI and hybrid layouts.
- **iOS Platform Libraries and Feature Integration:** Developing libraries for contacts, Apple Intelligence, speech, Continuity and Vision; feature pipelines combine native, Zoho R&D and external implementations with BYOK support.
- **Adaptive navigation layout:** Built a reusable three-panel layout for iPhone and iPad, with size/trait-based rail and tab-bar switching. Modules declare actions; the parent supplies navigation items and callbacks.
- **Spreadsheet scrolling:** Used Xcode Instruments to investigate spreadsheet scrolling stutter and repeated layout-item creation. Cached layout attributes in UICollectionViewLayout to avoid repeated reindexing as columns increased.
- **Component Integration MCP:** Developed an MCP exposing component APIs and documentation to make integration easier. A product team currently uses it.
- **AI SDLC for UI components:** Built a spec-driven prototype that plans features and tests before generating component code and UI automation, with platform-specific plans and support for versioned feature updates.

Project Trainee | Zoho | Sep 2021 - May 2022

Intern | Zoho | Apr 2021 - Jun 2021

Android & React development | Freelance | Startup projects

Intern | Servion Global Solutions | Nov 2019 - Dec 2019

SELECTED PROJECTS

Hermes Companion

Android (Kotlin/Jetpack Compose) and TypeScript web clients for Hermes, a self-hosted AI agent runtime, with pairing, chat, device control and notification forwarding.

Ara / Agent OS

Agent OS, the successor to the deprecated Ara prototype, is in development with a React/TypeScript dashboard, Python/FastAPI backend, PostgreSQL data library and Hermes-backed specialist-agent execution.

Tally

Open-source React/TypeScript finance tracker for multiple accounts, credit cards, loans and budgets, with statement imports, recovery and REST/stdio MCP tools.

EDUCATION

Bachelor of Engineering | 2018 - 2022
Electrical, Electronics, and Communications Engineering
Sri Sairam Engineering College, Chennai
